Ignite True-to-life Battles

Processing muscle
The popular G53 series has been updated with the recent release of Intel's® 2nd generation Core™ i7 for an even faster notebook. With performance rivaling that of a desktop computer, the G53SW is ready for anything that you throw at it, from office applications to video encoding and gaming.

Always cool
With its eye-catching design, the G53SW deploys unique cooling and noise dampening, with two huge rear venting exhausts that push both heat and noise away from users. This results in a cool and quiet environment.

Awesome audio
EAX and THX surround audio boosts game enjoyment and immersion with realistic effects and enveloping sound, while redefining sonic performance in music and movies.

Comfort first
The ergonomic illuminated keyboard sits at a 5 degree angle to increase usability even during long gaming sessions, plus surfaces come wrapped in a rubberized material for even greater ease of use.
Gorgeous graphics
The G53SW utilizes the brand new NVIDIA GTX 460M with a massive 1.5GB GDDR5. Based on Fermi technology, this new graphics processor offers native DirectX11 for a huge graphics gain in high definition gaming, plus dedicated video acceleration.

Bundled with the G53SW is 3DTV Play from NVIDIA, which projects the high definition graphics of this notebook onto any compatible 3DTV via HDMI 1.4. This includes 3D video, games and photos, taking the experience into the living room.

Data Sheet - **G74SX**

Hail to the King!

The world of portable gaming has a new reigning king. The G74SX is a performance notebook that imposes its will with the combined power of a second generation Intel® Core™ i7 CPU and NVIDIA® GTX 560M GPU with 3GB of GDDR5 VRAM. A score of P2008 in 3DMark11 and P9180 in 3DMark Vantage takes over the reins as the fastest notebook in the land. Support for DirectX®11 ensures that you'll not only have the fastest rig in town, but also the ability to play games as they were meant to be seen for a long time.

Stealth and Strength

Like its predecessor, the G74SX design was inspired by sharp polygonal shapes, but this time inspiration came from the US Navy's Sea Shadow stealth ship and modern day aircraft carriers. Like the stealth ship, opponents will never know what hit 'em, and like an aircraft carrier, the G74 has the firepower to shock and awe the competition.

True-to-life 3D Video & Audio

The G74SX is great for gaming, but its hardware is serious business. It offers the best 3D ecosystem for PCs, offering 3D content creation and editing. It's powered with NVIDIA® 3D Vision™, so games, photos and movies are all able to be enjoyed like never before. There's also the ability to output the G74SX to a 3D TV, so you can enjoy 3D entertainment from the living room. Pair that up with THX + EAX 5.0 3D gaming audio technology, and together they make the G74 not only a great gaming notebook, but also a hub for multimedia entertainment.

Get Comfy

Gaming is something to be enjoyed, so why not be more comfortable for extended gaming sessions? Fatigue will be a thing of the past, thanks to the G74's 5° incline keyboard designed to provide a better ergonomic angle, as well as super comfortable rubber-like palm rests that's easy on the palm and wrist. There's also more space between the keyboard and number pad, so it more resembles a desktop keyboard.

Ultra Portable

Data Sheet - **U46SV**

Power in a thin and light design

Under an inch thick!
The ultra-thin and light design fits more technology into a compact form factor that's easy to carry and use. The slim bezel means a bigger screen can be attached to a more slender chassis, while the spun aluminum finish creates a very unique look. ASUS has also engineered a special hinge-forward design for the new U46SV, allowing for a wider opening angle and easier viewing even in the confines of an aircraft seat.

Powerful 2nd generation Intel® Core™ processors and NVIDIA® GeForce® GPU
Standard voltage, uncompromising Core™ i5 CPUs easily handle more intense multitasking, higher definition and smoother multimedia, plus faster productivity for a portable PC you can rely on in any application. The discrete NVIDIA® GeForce® GT 540M GPU boosts visual output with native DirectX® 11 compatibility for the latest in graphics, so that everything from HD movies to high-end PC games runs smoothly and in incredible detail.

Extended battery life
Highly efficient technology and optimized energy requirements give you the benefit of a finely-tuned battery that can last up to 10 hours* on one charge. This means true all-day computing wherever you go, with no need to stop and seek out an inconvenient wall socket.

Power in a thin and light design

Super thin notebook with Intel standard voltage CPU

In today's world, more of our daily computing is done on the move and notebooks have become an essential part of our lives. In the past, having a notebook that was thin and lightweight meant sacrificing performance. Not anymore. Introducing the ASUS U36, the world's first 19mm thin notebook with an Intel® standard voltage CPU. Along with ASUS Super Hybrid Engine technology giving a boost in performance when needed, the U36 offers the absolute best combination of performance for the size. With the U36 weighing in at a mere 1.6kg with an 8-cell battery, it is also the lightest notebook with a standard voltage CPU, challenging the way you think about lightweight notebooks.

Exclusive thermal technology

Like humans, the harder a computer works, the hotter its internal temperature gets. The problem with pushing a computer to the limit is the amount of heat it generates and how to get rid of it. With the U36, ASUS engineers tackled this problem by developing exclusive thermal technology to keep not only the system cooler, but the palm rest area as well. Using dual lightweight heat pipes and an efficiently-designed layout, heat is transferred away from the palm rest for a more comfortable user experience.
