

SSD-KIT

2.5" HDD or SSD conversion for 3.5" Drive Bays

Upgrade your Computer's Storage Potential.

Are you looking for the very latest 2.5" Hard Disk Drive (HDD) or Solid State Drive (SSD) upgrade for your existing, 3.5" Drive Bay Setup? Do you need the updated SATA and Power Cables to realise the full potential of this new Storage Technology?

The **SSD-KIT** is a low cost and easy to install mounting and combined Power solution, allowing either 2.5" Format HDD or SSD Drives to be correctly and securely mounted into legacy Desktop, Workstation or Server-based 3.5" Drive Bay slots. Featuring lightweight aluminium guide rails with multiple slotted fixing points allows literally any legacy 3.5" Drive Bay to be used for new technology, 2.5" Storage Devices.

Not forgetting your new data and power requirements of these latest SATA 2.5" Drives, Dynamode also bundle a generous length SATA data cable, together with the standard 'molex' type Power Connector to SATA power connector – so now no need for expensive Power Supply or messy, over length Power Cables.

Everything to get you connected!
2.5" Guide Rails, SATA Data Cable,
Molex Power Adapter and screw fixings

Featuring...

- Lightweight aluminium 2.5" guide rails (1 pair)
- Ideal for 2.5" HDD or SSD fitment into 3.5" Drive Bays *
