

Intelligent scanning for optimised workflows

Unlock the full potential of document scanning

The fast and efficient DS-530 and DS-570W colour duplex document scanners are the intelligent choice for business document management, offering world-class performance and versatility. With the ability to scan at up to 35ppm/70ipm, these powerful, compact devices offer a wide range of media handling options that enable you to rapidly capture, index, store and share your business-critical documents.

The scanners can help your business gain control over critical information, improve the quality of your business decisions, and increase operational and process efficiency.

Scanning documents direct to a device of your choice offers flexibility for mobile workforces

Flexible and versatile media handling

Featuring best-in-class paper feed technology, an industry-first slow mode roller, and an innovative Double Feed Detection Skip function, the ability to scan challenging media has never been easier.

Whether you're scanning documents as small as a postage stamp (with the flatbed conversion kit), paper rolls as long as 6 metres, media as thin as 27gsm, thick card at 413gsm or A3¹, you can rely on rapid document processing at the highest quality.

Exceptional performance for improved productivity

Designed specifically for businesses that handle high quantities of documents, such as legal and accounting firms, the scanners allow you to capture high volumes of documents quickly.

An automatic feed mode allows even the largest documents on a variety of media to be scanned easily as one file.

The compact and sleek design keeps the devices' footprint to a minimum

Minimal downtime and reduced user intervention

An optional flatbed scanner conversion kit allows even the smallest of media (such as postage stamps) to be scanned safely to ensure document integrity allowing all documents to be scanned in one place.

The conversion kit also allows for the scanning of passports², books, glossy materials and bound media.

The flatbed scanner conversion kit enhances the device's already impressive flexibility

Dynamic and reliable document feed

Intelligent features such as the Active Separation Roller System help prevent tedious document double-feeds, ensuring every piece of paper is scanned accurately and captured at the highest quality – thanks to the on-board sensors or manual input of paper lengths.

The active feeding system starts with an innovative paper tray that helps pages to be scanned more easily. By reducing the friction between the tray and the page to be scanned, it enables media to pass through the device more easily while minimising feed errors.

Double Feed Detection Skip means difficult media – such as envelopes or documents with post-it notes – can be scanned without risk at the touch of a button.

The active feeding system ensures pages can be scanned easily

Technology for your business

Flexible connectivity

The DS-570W is the preferred option for sales teams, healthcare workers and government officials. The advanced compact wireless sheet-fed scanner delivers a truly flexible scanning experience so that documents can be captured securely. DS-570W connectivity options include USB 3.0 and 2.0/Wi-Fi/Wi-Fi Direct/Ethernet/NFC/ TWAIN/ISIS/WIA drivers.

Accelerated information processing

Due to the need for the effective automation of a wide range of processes present in back offices and customer-facing environments, these scanners are designed to streamline record keeping whilst delivering high levels of security, reliability and scalability.

These functions are aided by the devices' ability to ensure high-quality captures (300dpi) at high speeds thanks to image enhancement processing such as auto size crop, auto skew correction (hard edge) and colour slip reduction, carried out by a high-performance, dual-core CPU with hardware acceleration built in.

Seamless integration

Epson's intelligent scanning suite (including TWAIN and ISIS compatibility) allow captured files to be shared instantly – seamlessly connecting with your existing document management systems and cloud repositories so that workgroups benefit from better collaboration and improved efficiency.

Powerful imaging technology

Easily adjust images whilst scanning, using Epson's image enhancement software with de-skew and auto rotate functions. Advanced features such as barcode recognition and Zonal OCR allow quick document separation and easy file naming.

Scanning A3 sized media¹

1 - Scanning of A3 media uses folio made with carrier sheet.

Scanning of passports²

2 - Passports can be scanned using optional flatbed conversion kit.
